DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-19 and 30-33, drawn to a system and methods for automated loading of side-by-side stacks of thin objects to a thin-object feeder, classified in class 271, subclass 154.
- II. Claims 20-29, drawn to a method for processing mail delivered to at least one mail feeder, classified in class 414, subclass 810.

The apparatus of invention I and invention II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the process can be practiced by another materially different invention. The process of claim 20 merely requires transferring mail from the carrier to the conveyor. The process does not require a pusher and further does not require a pusher for laterally moving the mail out of the carrier as required by claim 1. Therefore, the process of claim 20 can be practiced by another material invention such as an apparatus for transferring mail which does not include a pusher.

The methods of invention I and invention II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, the methods of invention I have

Art Unit: 3653

separate utility such as a method for loading using a pusher to laterally move the mail from the carrier onto the conveyor. See MPEP § 806.05(d).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.
